

SL0019 New Numbering Convention for SMARTlift Schematics

SL0019	Version 1	SMART <i>lift</i>	Date: 10 Oct '07
--------	-----------	-------------------	------------------

Traditionally, Electrical Schematics have been numbered by the serial number of the unit to which they apply.

With Smartlift this causes unnecessary confusion as while the drawings don't change very much over time, it requires the service agents to request a pdf or print out each time they need to look at a unit's schematics.

To simplify this system, all SMARTlift schematic drawings now have an EL- number as below:

EL-37774 = SB200, 300, 330 SMARTlift 2.0

EL-37775 = SB200, 300, 330 SMARTlift 2.0 PTO

EL-37776 = SB361, 401 SMARTlift 2.0

EL-37777 = SB361, 401 SMARTlift 2.0 PTO

This means that once you have the schematic printed out, we can inform you over the phone or email which version applies to a particular unit and you can look up a stock print out.
