

TB0030 Introduction of Hetronic Radio Remote Controls

Date: 17/05/04

As part of the ongoing product improvement programme, STEELBRO Sidelifters will now be fitted with Hetronic brand radio remote controls. The advantages of the Hetronic radio remote are;

- Sender and receiver operate at 12 or 24 volt
- Sender and receiver are keyed together using a system of plug in keys rather than swapping PCB boards
- A 'teach' key is provided with each unit, rather than requiring a teach battery
- Easy to change frequency settings on transmitter / receiver
- One model of remote will cover all of our markets with the exception of the USA
- One model of remote control is used for SB360, SB330 and SB121, with different decals
- Better technical support and spare parts availability

The model of radio remote used with SMARTlift is different from the model introduced here.

The change is effective from approximately May 2004, however please use the following table to determine which units are fitted with Hetronic remotes (up to date as of 17 May 2004:

SB330 and SB360 (Mk6)

Market	Effective from (incl.)	Exceptions
New Zealand	SB7350	SB7290 has Hetronic, SB7354 has HBC
Australia	SB7307	SB7345, SB7365 have HBC
Other countries	SB7366	

SB121

Market	Effective from (incl.)	Exceptions
All	All	

SB361 and SB401
