

TB0059 New Bellhousing & Coupling Arrangement for Standard Power Pack

Date: 20 Sept 07	Author: Neil Savage	TB0059	Cross Ref: K0005
------------------	---------------------	--------	------------------

The standard powerpack on the Steelbro sidelifter has been changed to incorporate a new bellhousing and pump coupling arrangement.

Models and Markets:

All sidelifters with powerpacks in all markets affected.

Parts:

Kit HC-37078 replaces the following items: S1-18306, S1-18307, S1-18482, HC-18793.

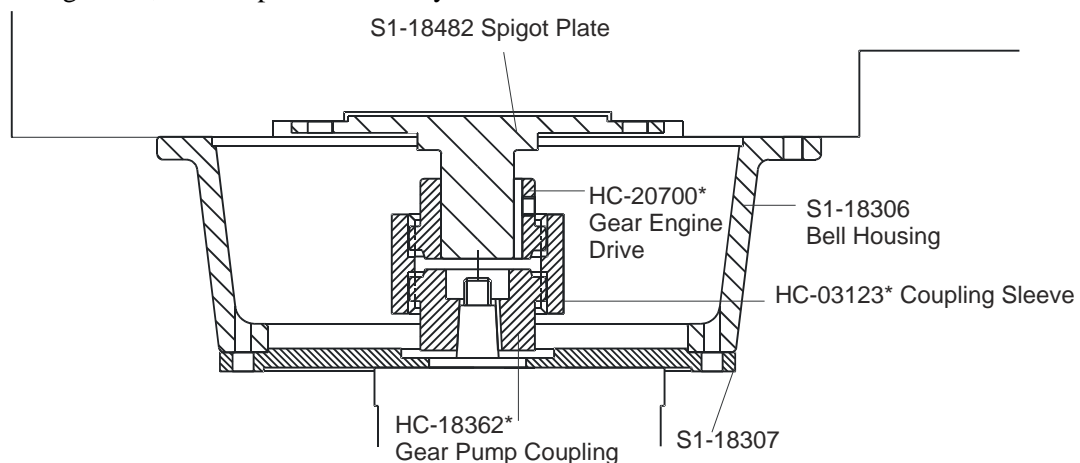

4x S1-37549 also required for securing electrical cables around edge of bellhousing.

Backward Compatibility:

The entire old coupling arrangement can be replaced by the new set up. Details on how to do this are in Service Info K0005.

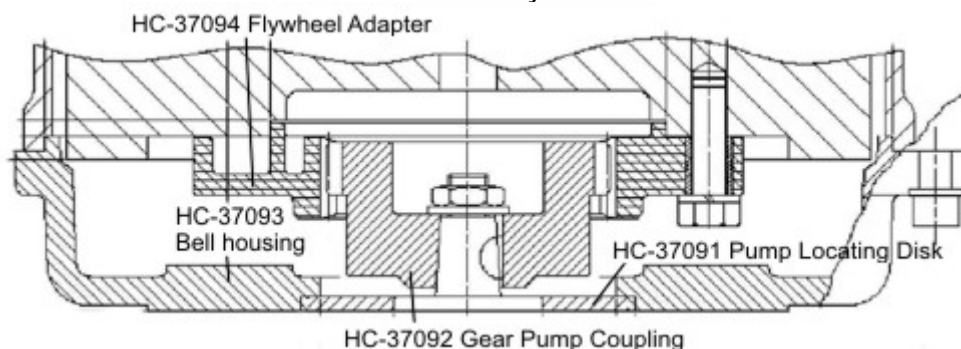

Benefits and Advantages to Change:

New bellhousing is self-locating onto the engine body which will reduce the possibility of issues with coupling caused by misalignment, and simplifies assembly/service.

*These three items make up kit HC-18793
