

Introduction of New Air Cleaner Bracket for Powerpack

Description

The bracket for mounting the air cleaner on the standard powerpack has been changed to improve vibration characteristics

Models and Markets

All models & markets which have mid-chassis engines in a standard powerpack

Bills of Material

Spare Parts: S1-19903 has been replaced by PP-41233 for V2403 engines
S1-19903 has been replaced by PP-41255 for V2203 engines

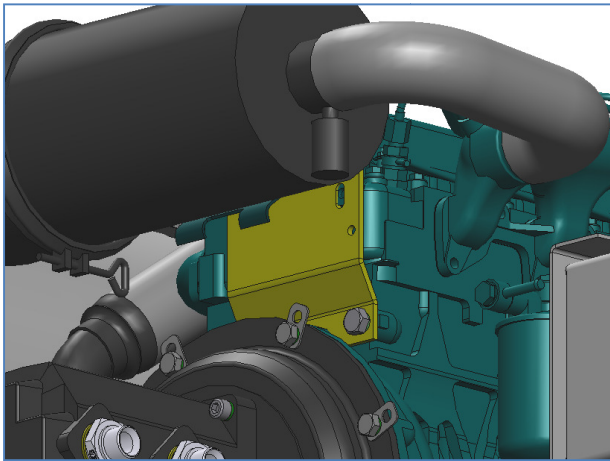

Figure 1 - Old bracket S1-19903

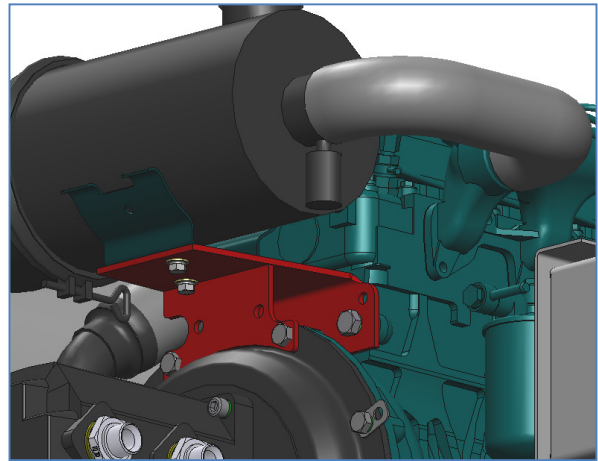

Figure 2 – New Bracket PP-41233

Backward Compatibility

The bracket PP-41233 can be fitted to any V2403 powerpack.
The bracket PP-41255 can be fitted to any V2203 powerpack (see Use Instructions).

Use Instructions

Fit as shown in figure 2. On V2203 engines which have the one piece steel bell housings (as shown in figure 2), 2mm washers/packers need to be fitted (existing stainless steel tie plates can be used) between the bracket & the bell housing. On V2203 engines with the aluminium bell housing, no packers are required.

Benefits and Advantages to Change

Better vibration characteristics leading to improved lifespan of powerpack
